

PLASTIC STORAGE

- ✎ No condensation
- ✎ No rust, no mould
- ✎ Cartons do not become soft

Plastic storage tents

Storage tents are used to quickly gain extra space and for storage. Customers renting a plastic hall, expect their material to be protected from damage such as corrosion or rust. In a plastic hall, condensation easily occurs on the ceiling. When it drips, it can damage the material in the store.

Remove the cause of the problems

With a dehumidifier, you can control the level of humidity in the tent. To avoid mould, the relative humidity should be kept below 70 %, and to avoid corrosion, the relative humidity should be kept below 50%.

DST dehumidifier Recusorb DR-40 installed in a plastic storage tent.
